

Survey from ESGAID

Dear Clinical Microbiology Members,

We would like to share with you some valuable information received from ESCMID to support an international survey focused on the current and future role of artificial intelligence (AI) in clinical microbiology.

Link to survey: <https://forms.gle/rPQe2ZVj6v19ot7aA>

The aim of this survey is to collect perspectives from professionals in clinical microbiology regarding awareness, use, expectations, and concerns related to AI-based tools in routine practice, diagnostics, and research. The results will be analysed and submitted for publication in a peer-reviewed scientific journal.

All survey responses will be collected anonymously and analysed in aggregate form for research and educational purposes. At the end of the questionnaire, participants may optionally provide their name, affiliation, and email address, which will be collected separately from survey responses and will be used exclusively for inclusion as collaborators in the study group of the resulting publication/s. The final manuscript/s drafts will be shared with societies included in the author byline for review and comments before submission for scientific publication.

Best regards,

On behalf of the SSM Clinical Microbiology Section
